AI Use and Collaboration Disclosure

Individual Assignment 3: Campus Event Explorer
Jerin Joseph | October 16, 2026

Collaboration

I did not collaborate with any other person on this assignment.

AI tool used

Claude (Anthropic), used through a chat conversation.

How I used it

I used Claude as a guide while building the app. It helped me plan the project structure and Gradle setup, explained Navigation Compose and state concepts I was unsure about, and showed me example code for some parts of the screens and navigation when I was stuck. It also wrote the text for the 12 sample events and helped draft the README.

I set up the project, wrote most of the code by myself, used Claude's help for parts I could not figure out and connected the pieces. I asked for explanations of the parts I did not understand. I ran the app on a Pixel 4 (API 29) emulator, ran into build errors and a crash while scrolling, and fixed them with Claude's help. I took the screenshots and made the commits.

Prompts (summarized)

1. Explain the project structure and what each file is for
2. What to put in .gitignore to keep error logs and build files out of Git
3. Create 12 sample events for strings.xml
4. Best way to load string resources into the event list
5. Help fixing EventListScreen layout
6. The purpose of Routes.kt and why it matters, and why parts of AppNavHost are written the way they are
7. Why the NavHost import was unresolved
8. Why the Gradle dependencies are needed for navigation
9. Fixing UI issues in EventDetailScreen
10. Why the Material icon imports were unresolved
11. Resolving a crash while scrolling
12. Help drafting the README and this disclosure
